

**Standard**COLORS

**Vari-Tone**<sup>®</sup> SERIES

of variegated earthtones perfect for exterior use.

A sound economic alternative with the appearance of natural materials, including granite, stone and marble.

**Designer Color** SERIES

The Signature Collection

**CUSTOM COLORS** too...

We match anything! Custom colors can be developed to match your requirements. Consult local manufacturer for availability.

NOTE: The colors in this brochure and in color chip kits are for preliminary selection only. Request full size sample to see actual color selection. Specify and erect a sample panel at least 4' x 4' at job site to show typical variation, range, and approval for each color, type, and size of block selected.

Natural and organic pigments incur natural change on the exterior, some more than others. Standard colors have been tested via 12 month exterior evaluations in Florida by the South Florida Test Service, Inc. and under ASTM C-744 for 500 hours of weatherometer. All colors are colorfast for interior use. The best colors for exterior use have an asterisk(\*) and are whites and pastels. Consult local manufacturer for field experience in your area and test data. Follow proper masonry industry recommended design and installation (see page 14). Specify Spectra-Glaze II Plus units with the Block Rite™ System for raw block and mortar and use as intended in weatherlight and breathable wall designs for durable long-lasting masonry. Where appropriate, specify water based epoxy grout for pointing exterior joints and joints in sanitary and food applications.

All colors are light stable for interior use. Some fluorescent light gives off ultra-violet rays which may cause a slight color shift, even in light stable pigments, after many years of exposure. Contact your local manufacturer for data on exterior field performance.
